

Exercise 19 Using Variables

5 to 15 minutes

In this exercise, you will practice using variables.

1. Open `VariablesArraysOperators/Exercises/Variables.html` for editing.
2. Below the `ADD PROMPT HERE` comment, write code that will prompt the user for her first name and assign the result to a variable.
3. Add a button below the Ringo button that reads "Your Name". Add functionality so that when this button is pressed an alert pops up showing the user's first name.
4. Test your solution in a browser.
