

## Exercise 22 Working with Global Functions

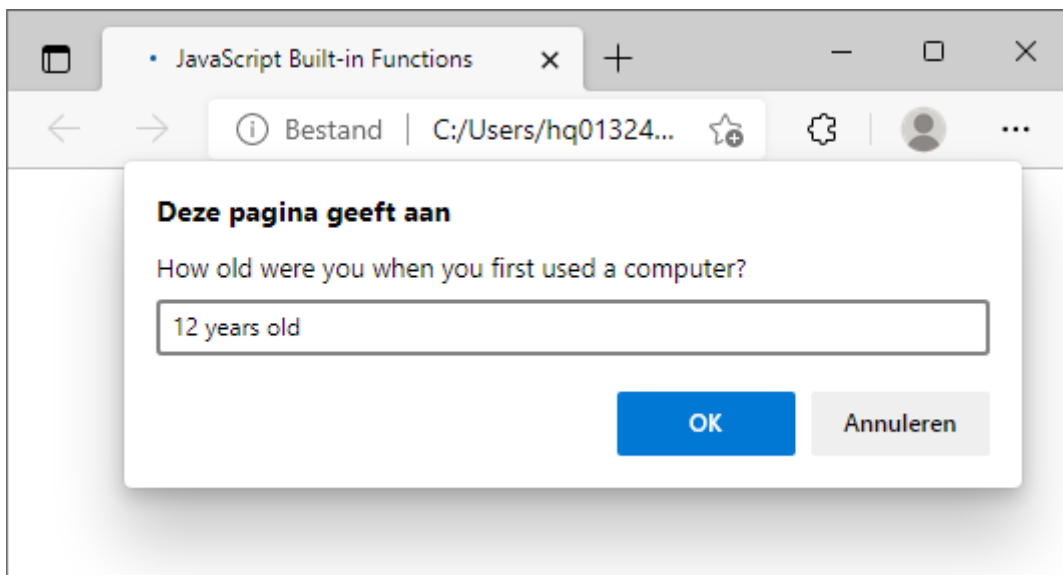

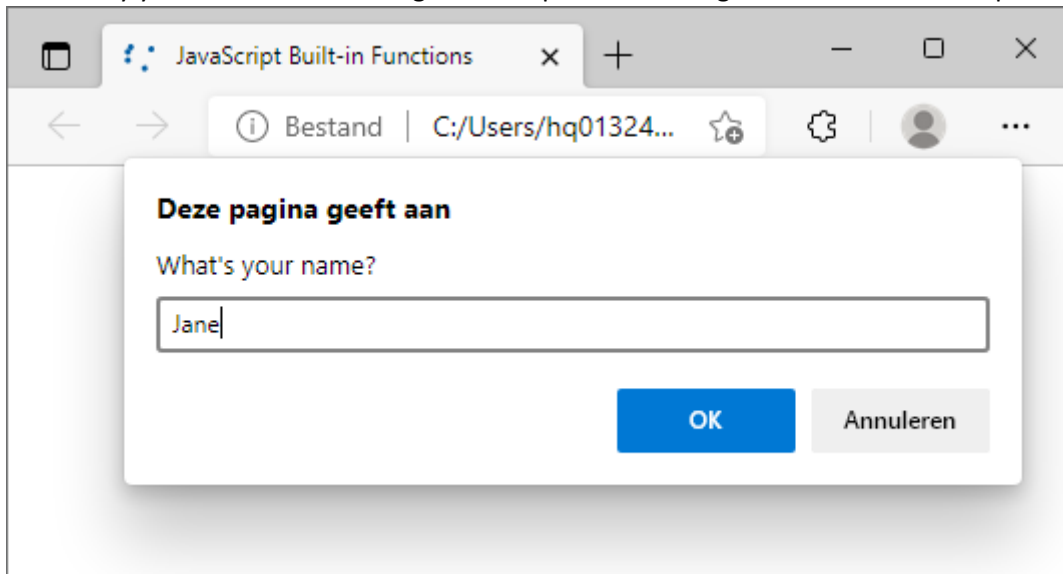

10 to 15 minutes

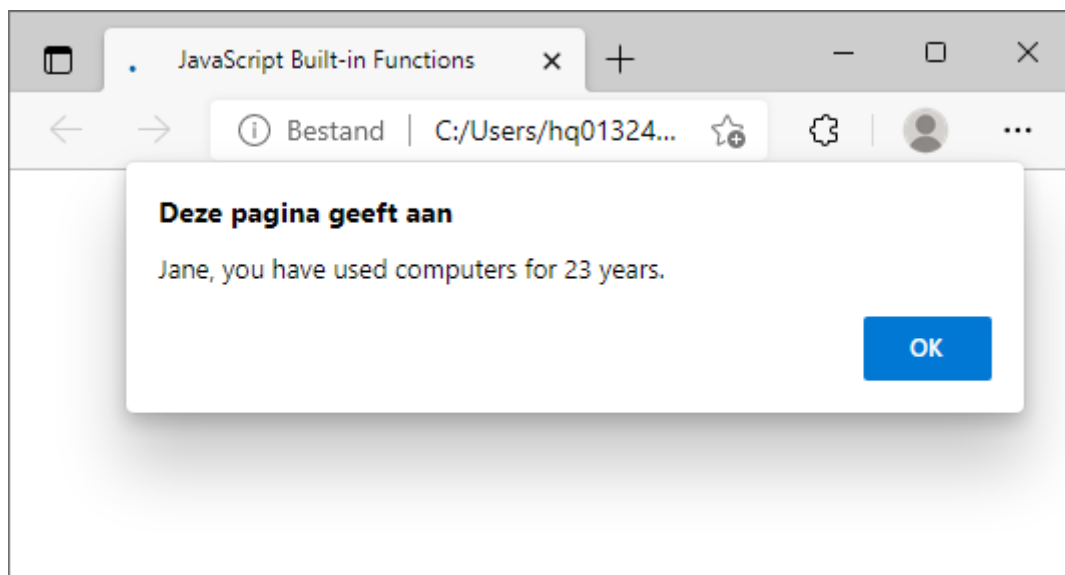

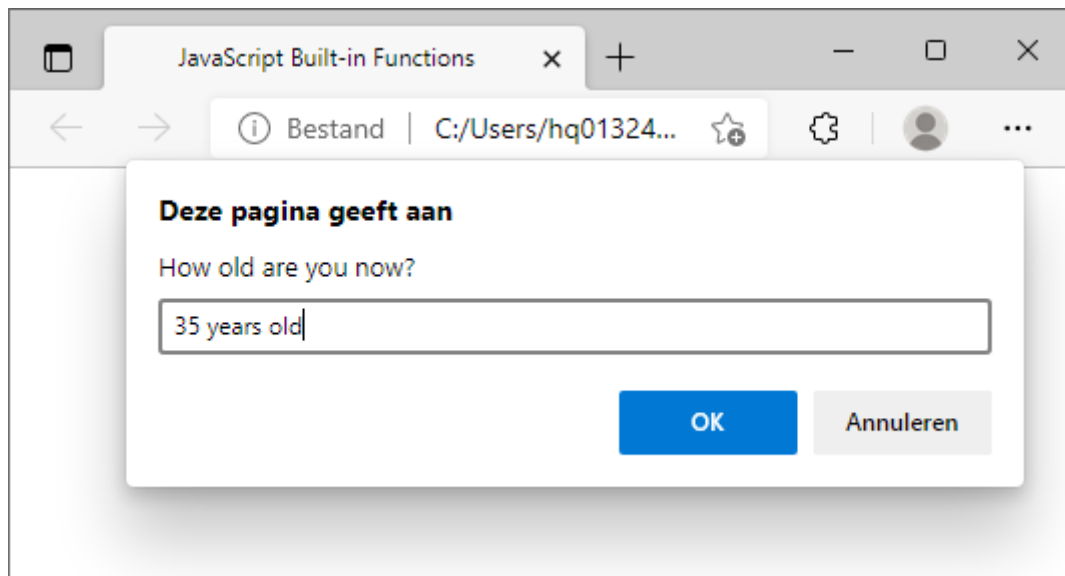

In this exercise, you will practice working with JavaScript's global functions.

1. Open `JavaScriptFunctions/Exercises/BuiltinFunctions.html` for editing.
2. Modify the file so that it outputs the sum of the two numbers entered by the user.

### \* Challenge

Create a new HTML file that prompts the user for his name, the age at which he first worked on a computer, and his current age. After gathering this information, pop up an alert that tells the user how many years he's been working on a computer. The images below show the steps:

Notice that the program is able to deal with numbers followed by strings (e.g, "12 years old").
